Comments

Overview.

Well-written thesis, with relevant contributions for Dialogue Summarisation and LLM reliability, which resulted in several scientific publications in recognised conferences and journals.

Knowledge Base and Literature Review.

The literature review covers the main topics of the work, namely previous work on Dialogue Summarisation, reliability and faithfulness of LLMs, followed by well-identified research gaps. Nevertheless, the following chapters could have more links to the related work.

Originality and Independence.

Despite anchored in the topic of Dialogue Summarisation, the contributions of the thesis are novel and the results are meaningful.

Arguments and Reasoning.

The thesis presents arguments in a clear, structured, and progressive way. Most options are well-motivated, but the connections with related work and sources of inspiration could be more frequent.

Evaluation within the Field.

The main proposed improvements are evaluated in different datasets, with different settings and compared to related work. Besides the automatic, I would highlight the human evaluation, for which the process could, nevertheless, be described more deeply. On the other hand, in some cases, it is not clear why the findings of a chapter are not considered in the following.

Completeness and Coherence.

The task of Dialogue Summarisation is tackled from different perspectives, described in Chapters 4 to 6 and also 8. Despite being connected by sharing the same topic, there could be more takeaways between them. Despite also using LLMs and focusing on hallucination, Chapter 7 is on a different task and feels a bit detached from the others.

Conclusion.

Due to the aforementioned reasons, the presented work is adequate for a PhD thesis.

Additional Comments.
